ABSTRACT

The aim of this report is to present a ranking of Communication journals covered in Google Scholar Metrics (GSM) for the period 2008-2012. It corresponds to the H Index update made last year for the period 2007-2011 (Delgado López-Cózar & Repiso 2013). Google Scholar Metrics doesn't currently allow to group and sort all journals belonging to a scientific discipline. In the case of Communication, in the ten listings displayed by GSM we can only locate 46 journals. Therefore, in an attempt to overcome this limitation, we have used the diversity of search procedures allowed by GSM to identify the greatest number of scientific journals of Communication with H Index calculated by this bibliometric tool.

The result is a ranking of 354 communication journals sorted by the same H Index, and mean as discriminating value. Journals are also grouped by quartiles.

BACKGROUND

Google Scholar Metrics was launched in April 2012, offering a new system for the bibliometric evaluation of scientific journals by counting the bibliographic citations journals have received in Google Scholar. Journal rankings are sorted by languages (showing the 100 journals with the greatest impact). This tool allows to sort by subject areas and disciplines, but only in the case of journals in English. In this case, it only shows the 20 journals with the highest H Index. This option is not available for journals in the other eight languages present in Google (Chinese, Portuguese, German, Spanish, French, Japanese, Dutch and Italian). In order to overcome this limitation, and using various search procedures, the first objective of this report is to provide a ranking for all those communication journals indexed in Google Scholar Metrics.

It means the H Index update made last year for the period 2007-2011. See:

METHODOLOGICAL NOTE

Subject area covered: scientific journals that deal with the phenomenon of communication (theory, history and research), media (press, radio and television), journalism, audiovisual media, cinema, rhetoric and journalistic message, advertising and public relations.

Journal search strategy: In order to identify communication journals, the following sources of information have been consulted:

- *ULRICH'S International Directory*, which is considered the largest and most up-to-date directory of periodic publications in the world. It retrieved all existing scientific journals (academic/scholarly) that had been indexed by topic in the categories («subjects»): «Communication», «Journalism», «Communication Television and Cable», «Communication Video», «Advertising» and «Public Relations».
- Google Scholar Metrics: Two strategies were employed here: Firstly, any indexed journals in the Communication category were downloaded. It should be noted that they were curiously listed under «Humanities», «Literature & Arts» and not under «Social Sciences». Secondly, a series of searches in journal titles was undertaken using the following keywords: «Communication», «Mass Communications», «Communication Research», «Journalism», «Media», «Film», «Advertising», «Cinema, Audiovisual», «Audio», «Radio», «Television», «Public Relations», «Public Opinion», «Movie». These searches were carried out in the following languages: English, French, Spanish, German, Italian, Portuguese, Chinese, Japanese, Korean, Arabic, Russian, Turkish and Polish.
- *Communication & Mass Media Complete*: Communication journals considered as «core», that is, entered in the database in their entirety (cover to cover). (www.ebscohost.com/academic/communication-mass-media-complete).
- Web of Science: Journals indexed in the topical categories of «Communication» and «Film, Radio & Television» (<http://ip-science.thomsonreuters.com/-mjl>).
- Scopus: Journals indexed in the topical categories of «Communication» and «Visual Arts and Performing Arts» (www.info.sciverse.com/scopus/scopus-in-detail/facts).

H Index Communication Journals according to Google Scholar Metrics (2008-2012)

After a manual filter of the entries for each search, to identify the relevant journals for the subject area covered by this paper, all the information was downloaded into a Microsoft Access® database, where titles were unified and any duplicates eliminated. A total of 903 communication journals were identified. These journals were then searched for in GSM in the last week of October 2013.

Criteria for the inclusion of Google Scholar Metrics journals: It covers only journals that have published at least 100 articles in the period 2008-2012 and those which have received at least one citation (i.e., excluding journals with h-index = 0).

Displaying the Results: The journals are sorted by their H Index. In case of equality of it, discriminator value is the mean of the number of citations obtained by the articles that contribute to the H Index.

A date has also been added. It shows its evolution, in contrast to the position held by every journal in Google Scholar Metrics in the period 2007-2011.
